**Vijay Bhatt** (Mobile - 9764834026, Email - vjbha9760@gmail.com)

MEAN/MERN/Full Stack Tech Lead

 **Experience:** 13 Years

 **Domain Knowledge:**
B2B Procurement, Operational Risk Model, Meeting Collaboration; ERPNext; Petrotechnical Suite

**Technical Knowledge:**
13 years of experience working as software engineer in software development project.
Last 5 years of experience working as technology lead in numerous organization designing/ developing software solutions and mentoring team.
Core prociency in javascript, typescript, nodejs, express, angular, react, html, css, docker, kubernetes, microservices architecture.

 **Projects Undertaken:** Procureedge Cloud Platform , Governance Risk Compliance, Chimay(Collaboration Tool), Matrix ERPNext platorm, PTS (Petrotechnical Suite)

- Currently working as technology lead in SLB (Schlumberger India Private Ltd) in PTS program.
- Worked for 1 year in ElasticRun ERP platform as technology lead.
- Worked for 1.5 year as senior engineer in Barco working as backend nodejs developer and looking into cloud deployments of microservices(docker, kubernetes and helm).
- Nearly 1years 3 month experience working as Officer in Citicorp Services India Ltd as Angular frontend and developer and devops.
- Nearly 8years of experience in the areas of software development and programming in javascript, node and angular in Infosys and Edgeverve System Limited(Infosys's product subsidiary).
- Experience of working in end to end development cycle involving requirement gathering and understanding, design, development, unit testing, deployment and providing development support to QA testing.

## CAREER PROGRESSION

**Product Engineer ← Procureedge Cloud Platform, Infosys/Edgeverve System Ltd| Since Dec 2011 – Jul 2017**

**Technical Staff Member ←Assistedge Cloud Platform, Infosys/Edgeverve System Ltd | Aug 2017 to Dec 2018**

**Officer ← Operational Risk, Citicorp Services India Pvt Ltd | Since Dec 2018**

**Senior Engineer ← Meeting Enterprise, Barco | March 2020 - Sep 2021**

**Technology Lead | Bigstep Technologies | Oct 2021 - Apr 2022**

**Lead Engineer | ElasticRun | Since Apr 2022**

**Tech Lead | SLB | Since May 2023**

**Key Responsibilities Highlights:**

- **Mean Stack Developer/Lead:** Extensive experience working as a mean stack developer in last 10 years. For last 5 years has taken lead responsibilities mentoring team and designing/developing tech solutions. Working with architects on understanding/implementing solutions.
- **Devops understanding:** Good Knowledge of devops for mean stack application in microservice architecture using docker, helm charts and kubernetes cluster.
- **Test-Driven development:** Developing and running jest/mocha test cases before actual development of the application.
- **Research and Development:** Identifying areas for modification in existing programs and subsequently developing these modifications and recommending improvements to existing sobware programs as necessary.
- **Team Coordination:** Working closely with other developers, UX designers, business and systems analysts.
- **Issue ResoluTon:** Analysing internal and customer defects and work with the team to fix those defects.
- **Technical Support:** Coordinated and collaborated with other team members and staff and customers regarding customer issues and resolved several severity customer issues.

**Key Accomplishments**

- Led and implemented complex projects with Global teams, and worked with stakeholders at the project levels.
- Displayed excellence in establishing strong customer relationship by delivering adding new features, fixing issues and more.
- Maintained client satisfaction index rating of 97%.
- Successfully improved communication between project stack holders and software development team by holding combined walk-through meetings, resulting in fewer changes in development.
- As a new joiner in Barco took the challenge of understanding and implementing the microservice architecture for nodejs backend and cloud deployment to kubernetes for chimay microservices.
- Worked in ElasticRun as lead engineer in frappe based web application suite called Matrix. Worked on improving complete CI/CD strategy and deployment automation for the application.
- Currently working as technology lead in SLB PTS program. Took initiative of implementing the complete billing module for billing customer based on cloud resource usage(vm usage). Currently working on creating new microservice driven architecture for shared service suite and deploying in internal lightops(Kubernetes cluster) on azure.

## PROJECTS UNDERTAKEN

**User Cart Module for Procureedge Cloud Product (Infosys/Edgeverve System Limited)**

*Synopsis:* ProcureEdge helps global enterprises move their procurement function to the next level by enabling them to realize rapid and sustainable spend savings while providing transformational business benefits across the Source-to-Pay (S2P) life cycle. Delivered in the Cloud, ProcureEdge is a flexible and scalable platorm, which can be deployed rapidly enabling enterprises to enhance savings, reduce total cost of ownership (TCO), and improve supplier performance and compliance measures.

As part of operational procurement module works on implementing below feature:

- Shopping carts allows users to accumulate a list of items for placing their request.
- They can also use the "Team Cart" feature in scenarios when multiple users should be allowed to create/change/confirm the shopping carts.
- It also provides for easy approvals of shopping carts and the platform supports multi-step approvals which can be configured as per organization's procurement policy.

**Responsibilities:**

- Mentor for junior developers in the team, responsibilities as a mentor include effort estimation, technical feasibility/analysis, code review and monitoring status of the deliverables with the mentees.
- Understanding the business requirements and functional workflow in the current P & G My Purchase (SAP SRM shopping cart) and developing the same for iBuy procureedge platorm.
- Understanding the FSD(Functional specificaiton document) which is used a base requirement document for application development.
- Understanding wireframes used as a UI reference for the developer on which the application resides.
- Doing application specific POC.

**Technologies:**

Javascript, Nodejs, HTML, CSS, webpack, babel, MongoDB, RabbitMQ,

**Java Enterprise Application automation for Assistedge Cloud Platorm (Edgeverve System Limited)**

*Synopsis:* AssistEdge cloud platform is an automation product offered by Edgeverve System Limited. It provides automation solution to cross technology application. The product allows the client to dock their application in an studio environment created in.NET language. The docking solution allows the user to configure their real life use cases through application scraping and then takes the configuration and run it using RPA bot. The product is a robotics based process automation and has competitors like Automation Anywhere and UIPath in the current market environment.

As part of java enterprise application (Oracle Fusion and Oracle EBS) automation we perform below operations:

- Hooking into a java process using java agents running on machine
- The agent used to identify the type of application running using application window class. For java application we targeted the window was a Swing/AWT of Java flex window application.
- Binding events on Java UI components on that window for giving user the option to scrape through the application and run his sample use case.
- One the configuration is received the later process is same as defined in product description running it using a process bot.

**Responsibilities**

- Automaton being a very technical product the responsibilities consist mostly of identifying the type of application client is using.
- Identifying Java based UI component in user application and check if it can be automated using our product.
- Challenges were mostly around what kind of jdk version client is using, security of the application and whether these parameters is causing hinderance in the path of automating it.

**Angular Frontend/ Javascript Developer in Governance Risk Compliance Project(Citicorp Services India Ltd)**

*Synopsis:* Governance Risk Compliance is an Operational Risk module in a banking organization. It allows bankers to forecast risk for a unit of operation called activity in a particular region on globe defined by a

governance entity. The banker than applies various control measures for the possible risk and generate a metric which give information regarding a severity of risk and how much it can be mitigated.

**Responsibilities:**

- Leading the team from offshore to co-ordinate with onshore team.
- Clarified issues with developers during efforts to validate designs and functional specifications.
- Involved in requirements gathering and design implementation.
- Designing angular components, routes and modules and bringing the wireframe live on screen.
- Creating common UI components used across projects using angular elements and ngx build (microfrontend approach)
- Integrating with third party ui libraries like primeng and customizing the ui components according to the need of the application.
- Fixing defects as and when required during SIT and UAT.

**Backend Nodejs developer for Chimay applicaTon(BARCO)**

*Synopsis:* Chimay is a cloud serviced product that enables multisite collaborative meetings, supporting various communication platforms. The various communication platform gives you a rich collaborative experience like whiteboarding via kickle, active content sharing via tokbox etc. The application uses a message bus architecture to communicate with application client frontends using pubnub.

**ResponsibiliTes:**

- Creating backend microservices to support chimay features like meeting service for join/leave meeting, adapter services for tokbox and kickle, room service for active room pairing etc.
- Cloud deployments of chimay microservices includes helm chart creation for individual services, deployment to kubernetes cluster etc.
- Implementing zero downtime deployment of microservices using appropriate deployment strategies(rolling update, blue/green).
- Implementing application health monitoring for chimay microservices using newrelic ping monitor.
- Implementing message bus architecture using pubnub for cascading notification to application front-end clients. It involves implementing secure subscription of message, detecting client presence using pubnub presence channel etc.
- ApplicaSon analytics using statsd as application metrics collection tool and graphite / grafana for metrics churning and dashboard visualization.

## Lead Engineer for Matrix application suite (ElasticRun)

*Synopsis*: Matrix is the in house erpnext platorm for ElasticRun. It helps with all HR and Accounts related functionalises at the organisation level.

Responsibilities:

- Understand multiple applications under the matrix umbrella and suggesting /extracting out core group of functionality into matrix core.
- Coordinate with different teams in terms of reusability, ease of usage and adaptation of matrix core framework into other matrix applications.
- Managing deploying and optimizing matrix core framework.

### Technical Lead for Petro Technical Suite (SLB)

*Synopsis*: PTS is a key petrotechnical program in SLB. Its primary responsibility is to provision VM on cloud for the customer and make key deployments available on cloud for doing so. The provisioned VM is auto created on user login and host of application needed by the user is auto deployed on VM. This help provisioning quick and auto creation on VM on cloud abstracting out all the technicalities from the user and user has a ready to use VM for performing its petrotechnical functionalities.

Responsibilities:

- Joined as a technical lead in the shared service team of PTS program. Shared service is a list of nodejs services. Its primary service is the provisioning service which trigger vm related operation on cloud based on user request.
- My key responsibility involve manage all shared services with respect to small enhancement, bug fixes and architectural improvement needed in it.
- Planning/Grooming requirement with team and presenting it to higher stakeholder for requirement review.
- Helping out team members with implementation of requirement. Doing sprint planning and making sure key work item are delivered based on season planning.
- Have developed a key billing service and implemented the initiative. The service was responsible for making the billing of user based on cloud vm usage.
- Currently responsible for rearchitecting old bulky service to newer lean microservices and deploy on internal lightops cluster based on latest standard.
- Implemented event grid for azure vm deployment status capture.

## Techinical Proficiency:

### Javascript/Typescript:

- Sound knowledge of core javascripts concept.
- Experience of working and implementing some of the key javascript design patterns.
- Core understanding of implementing some of the key data structures in javascript like stack, queues, linked list, tree,sorting and searching algorithms.
- Knowledge of next generation javascript releases ES6/ES 2015 and so on.New ES6 features like let, const, arrow functions, destructuring, spread operators, rest and default parameters, maps, classes and subclasses.
- Knowledge of asynchronous javascript concepts using callback, promises and async-await. Event loop and callback message queue architecture
- Sound knowledge of writing type safe javascript code using typescript.
- Knowledge of all key typescript concepts generics,decorators , interface and classes

### Nodejs:

- Experience of using nodejs as backend language in multiple mean stack projects.
- Complete knowledge of core nodejs concepts, node js core libraries, c++ implementation of nodejs(libuv), node js threadpool and os delegation , event emitters, streams and buffers.
- Complete knowledge of setting nodejs middleware chain and use the same for setting up some of the project features like logging using morgan, authentication using jwt and other libraries.

- Experience in writing restful apis using nodejs frameworks like express and knowledge of using other libraries for supporting the endpoints like bodyparser middleware , static middlewares etc.
- Have used multer for file upload, mongoose for database operations and experience in using redis as database cache server.
- Knowledge of writing extensive test cases for backend apis using jest/mocha and using supertest for express endpoints testing and generating code coverages.

**Frontend Framework(Angular/React)**

- Have hands on experience in using angular 6+ cli framework.
- Well versed in implementing all core concepts of angular like components, directives, pipes, services, style encapsulations etc.
- Working knowledge of angular forms.
- Experience of working with angular routers and lazy loading of angular modules.
- Knowledge of redux state management in angular using ngrx and angular store.
- Experience of working and creating reusable angular libraries.
- Knowledge of integrating third party component libraries like ag-grid and angular material in angular applications.
- Knowledge of building performance optimized angular builds, deployment and server side rendering of angular apps.
- Also have 1.5 years of experience working with react library.
- Knowledge of core react concepts jsx, functional and class based components, component communication using props, modular css styling etc.
- Knowledge of react hooks like useState, useEffect, useRef, useReducer, useContext, useCallback etc.
- Knowledge of react custom hooks for creating reusable custom logic.
- Knowledge of redux state management in react using redux, redux-toolkit, and react-redux.
- Knowledge of creating multi page react app with react routing using react-router.

**User Interface and Project Bundling(HTML/CSS/Webpack/Babel)**

- Knowledge of some of the key HTML5 features like localstorage, sessionstorage, HTML5 tags etc.
- Knowledge of CSS5 and key css concepts involving css specificity, display and position properties, creating layouts using flex, pseudo classes and elements, media queries etc.
- Some knowledge of using css pre-processor like sass.
- Have used and configured webpack module bundler and webpack dev server for javascript based development and using babel , babel-loader, babel-polyfill, babel-preset-env for polyfilling and transpiling ES6 code to ES5 for old browsers.
- Knowledge of configuring webpack for client side development using loaders like file-loader, css-loader, style-loader, sass-loader, babel-loader, ts-loader and handlebars-loader.
- Knowledge of webpack plugins like MiniCssExtractPlugin, HtmlWebpackPlugin, TerserPlugin, Clean-WebpackPlugin and few others.
- Knowledge of configuring seing up multiple chunks using webpack and integrating with bootstrap, jquery and fontawesome etc.

**Module Federation and Micro Frontnend**

- Knowledge of using webpack module federation plugin(webpack 5) for creating microfrontend architecture.

- Have worked on implementing container/shell applications hosting multiple microfrontend applications in angular and react application.
- Knowledge of key module federation concept like remote sharing of modules, sharing libraries between shell and microfrontend application, singleton and strict version checking for shared libraries etc.
- Knowledge of dynamic loading of remote modules.

**Devops CI/CD and Containerization(Docker, Kubernetes, Jenkins/Travis, Deployment strategies)**

- Basic knowledge of docker , creating images and container using docker for a node mean stack application using base images.
- Knowledge of using docker compose for resolving service dependencies for multi container application.
- Knowledge of using routing server like nginx for production grade deployment of multi container docker application.
- Knowledge of Kubernetes objects like pod, deployment, cluster ip service, persistent volume claim and ingress routing using nginx implementation.
- Some knowledge of creating helm charts for kubernetes deployment and bundling using helmsman.
- Some knowledge of different kubernetes deployment strategies like blue/green deployment, canary deployment and rolling update strategy.
- Knowledge of seeing ci/cd pipeline using github repository and jenkins or travis and build tool. Implemented project using headless chrome browser testing using puppeteer and travis.
- Knowledge of setting up liveness / readiness probe for pod deployments in kubernetes cluster.
- Knowledge of sidecar architecture in kubernetes service deployment.
- Some knowledge of aws deployment using travis deployment, seeing up elastic bean stalk application, using s3 storage bucket, seeing up I am authentication etc.

## EDUCATION

| EXAMINATION | COLLEGE/SCHOOL | YEAR | UNIVERSITY/COUNCIL | DGPA/%MARKS |
|---|---|---|---|---|
| Bachelor of Technology | InsTtute Of Engineering and Management | 2011 | W.B.U.T. | 8.57 |
| Higher Secondary ExaminaTon(12th grade) | Hindmotor High School | 2007 | W.B.C.H.S.E | 80% |
| Secondary ExaminaTon (10th grade) | Hindmotor High School | 2005 | W.B.S.E | 80.7% |

## PERSONAL DETAILS

Date of Birth: 23rd May 1989

Languages Known: Hindi, English, Bengali

Address: Kalika Colony, Lohariyasal Talla, Bhagwanpur road, Block, Haldwani, Nainital - 263139.
